ВЕТЕРИНАРНА КЛИНИКА Д-р. Марин Величковски

Test Report

Species:Dog	ID:56	Patient name:kaja
Owner:	Gender:	Age:0 Years
Analyzer Information: 0C1231-4-0015	Diagnosis note:	

Report

Item Name	Sample Type	Result(Ct)	Ranges	Indicator	Lot
CDV		NoCt	>36 or NoCt	Negative(-)	250850
CPIV		NoCt	>36 or NoCt	Negative(-)	250850
CAV-2		NoCt	>36 or NoCt	Negative(-)	250850
Bb		NoCt	>36 or NoCt	Negative(-)	250850
MC		25.03	>36 or NoCt	Postive(+)	250850

Report Explanation:

Ct≤17: extremely high concentration of pathogens; 17<Ct≤27: high concentration of pathogens;
27<Ct≤36: low concentration of pathogens; Ct>36: extremely low concentration of pathogens or no pathogens; NoCt: no pathogens;
Note: when it reports Ct>36, there is possibility that the pathogen is not during detoxification period. Comprehensive consideration should be taken in combination with clinical symptoms and other test results.

Note:

1.The test results of this kit are for clinical reference only. Comprehensive consideration should be given to the clinical diagnosis and treatment of patients in combination with pathogen specturm and epidemic status.
2.When the Ct value is ≤36, the detection result is positive.
When the Ct value is > 36 or NoCt , the result is negative
*If the Ct value is >36. Retest is recommended. If the Ct value is > 36 or NoCt , the result is negative. If the Ct value is ≤36, the detection result is positive.
